

Blumer Lehmann starts a new combined mass timber production

and is expanding the range to include CLT and glulam semi-finished products. The new glulam production line is scheduled to go into operation in September 2025, and the first cross-laminated timber will be produced in June 2026. The automation of CLT solid wood panel production optimizes the manufacture of floor and ceiling elements.

After careful examination, LEDINEK has been selected as the main supplier, also making impression by its experience from 22 CLT systems and numerous GLT systems. LEDINEK offers an extensive product portfolio, including a sorting line, defect cutting, lamella storage, lamella planer, edge gluing for single-layer panels, and automated GLT production.

The plant is fully automated and allows for the production of standard GLT, CLT, as well as specialized CLT. Ledinek also delivers a handling mechanization for the surface sanding machine and the CNC processing.

We look forward to future cooperation and warmly welcome Blumer Lehmann to the LEDINEK family.
